MILLA BIFLORA

MILLA BIFLORA

New introduction from Mexico where it is called Estrellitas, or Little Stars, by the country people. Showy white flowers, opening out flat, waxy in texture, about two inches in diameter, with six petals not quite separated. A faint stripe of soft apple green runs from tip to base on the outside of each petal. The stems are wiry, 12 to 18 inches tall, bearing two to seven flowers each. Foliage inconspicuous. Very free blooming from July to September. Flowers cut well and have a pleasant lily-like fragrance. Most attractive both in arrangements and in the garden. The striking hexagonal shape of bud and flower and the regular striping lend a faintly modernistic note that is both attractive and unusual. Should be dug in winter except in milder climates. Delivery early winter.

\$10.00 per 100

\$75.00 per 1000

MORAEA POLYSTACHYA

MOREA POLYSTACHYA

New introduction. Slender plant 18 to 24 inches high with many wiry branches. Well covered with flowers looking at a distance like a close group of butterflies. The outer segments of the flowers are light mauve, pencilled with Parma violet, with a bright yellow spot at the base, inner segments light mauve with little pencilling. Starts flowering six weeks after planting and keeps on three to four months. Blooms throughout the year can be had in the milder climates by making successive plantings about every two months.

Very useful in the colder climates as a window pot plant in the winter and out of doors in the spring and summer as soon as danger of heavy frost is over.

Planted in clumps it provides a mass of color over a long period and should be very useful in the border especially as a supplementary plant in iris gardens. Corms can be held in cold storage at 40 degrees to make successive plantings over a long period. Delivery August and February.

\$5.00 per 100

ZEPHYRANTHES ROBUSTA

Large bright pink flowers appearing in late summer on 6 to 10 inch stems. Foliage during winter and spring. The flowers are large enough and stems long enough to be very useful for cutting. Its adaptability to culture in pots, rock gardens and borders makes it a very useful member of a well known group.
